

## ABSTRACT

A method for a product seller to distribute a product. The method includes applying a marking to each of a plurality of packages and loading the packages with product so that information about a product in a package is associated with the marking on the package. The method includes grouping a plurality of packages into a container. The method includes applying an RFID tag, a one dimensional marking, or a two dimensional marking to the container, wherein information related to the product of the plurality of packages is associated with the RFID tag, the one dimensional marking or the two dimensional marking. The method includes shipping the container to a product buyer, wherein the product buyer can retrieve the information about the product in each of the plurality of packages by reading the RFID tag, the one dimensional marking or the two dimensional marking on the container.
